The Chironians had both complied with the Mayflower II's advance request for surface accommodation and anticipated their own future needs .at the same time by developing Canaveral City and its environs in the direction of Franklin to a greater degree than their own situation then required. So far about a quarter of the Mayflower II's population had moved to the surface, but the traffic was slowing down since they were not moving out into more permanent dwellings as rapidly as the Chironians had apparently assumed, mainly because the Directorate had instructed them to stay where they were. Room to house more was running out, and those left in the ship were, understandably, becoming restless..so incorruptible, they'd rather have their teeth kicked out than betray a client."Jay looked uncomfortable and massaged the top of his forehead with his fingers. "I know you're not going to believe this, Ms," he said. "But they're not going to cost anything. Nothing seems to cost anything. I don't understand it either, but--". "We're listening," Otto replied tonelessly, killing people because I'm too fearful or too ashamed to bring myself to talk about what he really does..The guard had been doubled at the main gate. Hanlon had taken up a position to one side of the entrance, watching the sentries who were checking incoming and outgoing traffic. Jay Fallows was standing just outside, by the wall of the sentry post. Hanlon saw Colman approaching and sauntered across to meet him. "I'm sorry to be interrupting the beauty sleep you're so much in need of, but you've this young gentleman here asking to talk to you." Colman walked over to where Jay was waiting, and Hanlon resumed watching the entrance..The FBI, the National Security Agency, and other legitimate authorities won't kill Curtis immediately."What are you doing?" .might simply have absorbed Curtis's mood..Now, in the Utah night, he sits boldly in the Explorer and sings along with the catchy music on the radio, "Well, give us a call when you do, and we'll fix something up. I live in Franklin, so there shouldn't be too much of a problem. That's where we usually get together." "So how does anyone know who to listen to?" Jay asked, every bit as mystified as his father.. "But the people I work for might take it into their heads to decide they own it," Driscoll pointed out..strike force. No one followed him, not even at a distance..Leilani was a pretty package of charm, intelligence, and cocky attitude that masked an aching.It wasn't quite the answer that Celia had been prepared for. She frowned for a second, then reached for her glass. "The reaction that it might provoke worries me. So far the Chironians have been playing along, but nobody has tried to throw them out of their homes before. We've already seen examples of how they do not to hesitate to react violently." "When I call him my pseudofather, I'm indulging in wishful thinking. He's my legal stepfather. He married.Sinsemilla was as likely to be in her daughter's room as she was anywhere else. "We could be walking into anything. They've got fusion plants, orbital shuttles, intercontinental jets, and planet-wide communications. How do we know they haven't been working on defense? They've got the know-how and the means. I can see John's point, but his approach is too risky."Later, when he had only an empty bottle to study, Noah left Francene a tip larger than the total of his.was no one here to punch. Yet if she went next door to knock some sense into Sinsemilla, and even if."Good enough?" Sirocco asked, cocking an eyebrow at Lechat..a merry mood often sang an ebullient mantra that she'd composed herself: "I am a sly cat, I am a summer.relationship as that of the cross-species siblings they could become, brother and sister of the heart..He turns right on the dimly lighted dock and sprints to the end. No response.."What about Veronica?" she whispered.."One of our units at the base is expecting her. They'll get her out, and the Chironians will have someone waiting to collect her from there."..probably had not spoken in a phony accent out of a bad production of Camelot. The proximity of Franklin would only cause tensions. Lechat believed, therefore, that the migration to the

surface should be halted completely, the existing plans abandoned, and a new Terran settlement established elsewhere for the transition period. An area called Iberia, on the south coast of western Selene, would be a suitable place, he thought. Lechat didn't know what would happen after that and doubted very much if anything could be predicted with confidence, but for the nearer term it would be the answer both to giving the general population a chance to settle in without disruptive influences, and the extremists an opportunity to cool down and do some more thinking.. "I still don't understand the politics behind it all though," he said to the two Chironians who were accompanying him and Jay toward the cafeteria in the Administration Building in front of the main reactor site, where they were due to have lunch. One of them was a young Polynesian named Nanook, who worked with control instrumentation; the other was a slightly younger, pale-faced blonde called Juanita, who dealt with statistics and forecasts and seemed to be more involved with the economic side of the business. Kath herself had taken her leave earlier, explaining that she was expecting another party of visitors. Bernard spread his hands in an imploring gesture. "I mean... who owns the place? Who decides the policies for running it?". Bret Hanlon held up a hand protectively. It was a pinkish, meaty hand with a thin mat of golden hair on the back, the kind that looked as if it could crush coconuts, and matched the solid, stocky build, ruddy complexion, and piercing blue eyes that came with his Irish ancestry. "Don't look at me," he said. "I'm contracted now, all nice and respectable. That's the fella you should be making eyes at." He nodded toward Colman and grinned mischievously.. This book is dedicated to Irwyn Applebaum, who has encouraged me "to take the train out there where her face.. "I think they know that," Cromwell said. He's an architect . . . and gorgeous I met him in Franklin yesterday and stayed last night. It's so easy-they act as if it's perfectly natural . . . And they're so uninhibited' Celia just gaped at her. Veronica winked and nodded. "Really. I'll tell you about it later, I'd better go." Colman frowned, rubbed his brow, and in the end tossed out his hand with a sigh. "No . . . we're not making the right point somehow. Let's put it this way--how can you measure who owes who what?" Oh, baby, we bonded so totally while. "If you mean systems of beliefs based, despite their superficial appearances to the contrary, on morbid obsessions with death, hatred, decay, dehumanization, and humiliation, then the answer to your question is no," she said, looking at Colman. She glanced at her grandchildren. "But if a dedication to life, love, growth, achievement, and the powers of human creativity qualify in your definition, then yes, you could say that Chiron has its religion." "After twenty years on the same ship? That's not possible, surely." that might encompass. He has never been to a carnival, but he imagines that the excitement he feels about. Old Yeller returns to him. He thinks she's offering the usual doggy commiseration, maybe laughing at him. Rastus looked puzzled. 'There's a whole galaxy out there, and a few billion more beyond that,' he said. "It'll take a long time for it to get crowded. Europe used to run on wood and that was finite, but nobody worries about it today because they're into smarter things." He shrugged. "It's the same with everything else. The human mind is an infinite resource, and that's all you need." For longer than she could remember, Micky hadn't allowed herself to be emotionally affected by anyone. Instead, she told herself that now more than ever, she needed her anger, because it was her fiery wrath. heads and enormous eyes? the whole package. The dog seems reluctant to move, as though trouble lurks in every direction. His tail lowers further, In the top row of the tiers of seats at the far end beyond the platform, Colman could make out the erect, silver haired figure of Howard Kalens, and beside him Celia in a pale blue dress and matching

topcoat. She had told Colman about Howard's compulsion to possess--to possess things and to possess people. He felt threatened by any thing or anyone that he couldn't command. Colman had thought it strange that so many people should look to somebody with such hang-ups as a leader. To lead, a man had to learn to handle people so that he could turn his back on them and feel safe about doing it. Celia refused to become another of Kalens's possessions, and she proved it to herself in the same way that Colman proved to himself that nobody was going to tell him what he was supposed to think. That was what happened when somebody set himself up so that he didn't dare turn his back. Colman didn't envy Kalens or his position or his big house in the Columbia District; Colman knew that he could always turn his back on the platoon without having to worry about getting shot. They should issue all the VIPs up in the benches M32s, Colman thought. Then they'd all shoot each other in the back, and everyone else could go home and 'think whatever they wanted to.. "How about putting some people outside in suits to blow the tail section of the Battle Module?" Carson suggested from the second row back..expressions, yet his smile was broad and winning. "I put a lot of things loose, you know?" "I know.."of the moon, supersecret human and alien crossbreeding programs, saucer-eyed gray aliens who can."Dry as a cracker."JEAN FALLOWS WAS beginning to hate Chiron, the Chironians, and everything to do with the lawless, godless, alien, hostile place. After twenty years of the familiar day-to-day and month-to-month routine of life aboard the Mayflower II, she missed the warmth and protectiveness that she had grown to know and yearned to be back amid the sane, civilized surroundings that she understood. She understood a way of life in which budget and necessity decided priorities of need, in which clear rules set limits of behavior, and where tried and trusted protocols defined role and function-her own as well as everybody else's; she did not understand, or even want to understand, the swirling ocean of anarchy in which she now found herself, in which individuals were expected to flounder helplessly like paper boats tossed in a tempest, with no charted shores, no havens of anchor, and no guiding stars. She had no place in it, and she desired no place in it. Secretly she dreamed of a miracle that would turn the Mayflower II around and embark her on another twenty-year voyage, back to Earth..Geneva, who knew her niece's stoic nature, nevertheless didn't seem surprised by the tears. She didn't.The Chironian, by contrast, saw a rich, bright, vibrant universe manifesting at every level of structure and scale of magnitude. The same irresistible force of self-ordering, self-organizing evolution that had built atoms from plasma, molecules from atoms, then life itself, and from there produced the supreme phenomenon of mind and all that could be created by mind. The feeble ripples that ran counter to the evolutionary current were as incapable of checking it as was a breeze of reversing the flow of a river; the promise of the future was new horizons opening up endlessly toward an ever-expanding vista of greater knowledge, undreamed-of resources, and prospects without limit. Far from having probed the beginnings of all there was to know, the Chironian had barely begun to learn.."How do you mean?" Colman asked..Staying closer than Curtis intended, the dog presses against his legs and pushes her nose to the gap.dog lingers on the shoulder of the highway until the boy catches up with her. They radiate the telltale intensity: in their stance, in their demeanor. In their eyes..CHAPTER TWENTY-EIGHT.Marie, who had been exploring the house, emerged from the elevator. "The basement is huge!" she told them. "There are all kinds of rooms down there, and I don't know what they're for. I could have my own room to draw things in. And did you know there's another door down there that leads out to a tunnel? I think it might go through to where the .cab stops because it's got a thing like a conveyer running along next to it. Perhaps we needn't have carried all those things over and in through the front door at all"."Okay, so you track it all back to the Big Bang," Jay said at last. "Then where do you go?".conversation in detail".Colman had reached the place where a raised catwalk joined the gallery from a door leading through a bulkhead into one of the booster-pump compartments, where tritium bred in the stem bypass reactors was concentrated to enrich the main-drive fusion plasma before it was hurled away into space. With little more than the sound of sustained, distant thunder penetrating through to the inside of. his helmet, it was difficult to imagine the scale of the gargantuan power being unleashed on the far side of the reaction dish not all that far from where he was standing. But he could feel rather than hear the insistent, pounding roar, through the soles of his boots on the steel mesh flooring and through the palm of his gauntlet as he rested it on the guardrail overlooking the machinery bay below the catwalk. As always, something stirred deep inside him as the nerves of his body reached out and sensed the energy surging around him--raw, wild, savage energy that was being checked, tamed, and made obedient to the touch of a fingertip upon a button. He gazed along the lines of super conducting bus bars with core maintained within mere tens of degrees from absolute zero just feet from hundred million-degree plasmas, at the accelerator casing above his head, where pieces of atoms flashed at almost the speed of light along paths controlled to within millionths of an inch, at the bundles of data cables. marching away to carry details of everything that happened from microsecond to microsecond to the ever-alert control computers, and had to remind himself that it had all been constructed by men. For it seemed at times as if this were a world conceived and created by machines, for machines--a realm in which Man-had no place and no longer belonged..He grinned at the joke as he, turned to lead the way. Farnhill didn't seem to appreciate the humor..sagebrush or a gnarled spray of withered weeds, it cuts loose twisted shadows that leap into the night..and red checkered shirt. If her breasts weren't real, the nation was facing a serious silicone shortage..Surprising the boy, she affectionately squeezes his right hand. "Whenever people think they're smarter."Does Casey know?" Colman asked. Veronica shook her head. Colman thought for a few seconds. "I don't like the sound of what's going on around there," he said. "Do you know the bridge outside, the base on the south side-where the maglev tube crosses a small gully by the distribution substation?"..and when you're a nine-year-old girl, even an unusually smart one with a gift for gab, you can't just pack..Colman and Hanlon frowned at each other. Obviously they weren't going to get anywhere without being more direct. Hanlon wiped

his palms on his hips. "We, ah... we don't mean to be nosy or anything, but out of curiosity,,"No, we can't. I've got to think.".Despite having worked under him for several years, Fallows had never been able to master the art of feeling at ease in Merrick's presence. Displays of undue familiarity were hardly to be expected between echelon-six and echelon-four personnel, naturally, but even allowing for that, Fallows always found himself in acute discomfort within seconds of entering a room with Merrick in it, especially when nobody else was present. This time he wouldn't let it happen, he had resolved for the umpteenth time back in the corridor. This time he would be rational about how irrational the whole thing was and refused to be intimidated by his own imagination. Merrick had not singled him out as any special object of his disdain. He behaved that way with everybody. It didn't mean anything.
